Students’ Centre in Kandahar, Afghanistan

Project Contribution for the “Luftschloss” Competition: “150 years ETH Zürich”
1st Place - Execution Planned 2005
Ivica Brnic | Florian Graf | Wolfgang Rossbauer

Concept

Building is a site-specific building in a challenging environment, surrounded by the multitude of its form, essentially challengeable to be encountered and environment-sensitive. The building is conceived as a fully responsive environment, where the design is a tool for the way of life, the way of functioning, and personal investigation of its environment is essential. Profitable and efficient energy-saving is a basis of concern, and the efficiency is expressed in the reduction of energy consumption and functional interferences, which are integrated in the multi-functional and multi-functional approach. The building focuses on the use of natural resources, such as light and daylight, and the adaptation of an efficient, effective, and functional approach. The building is a building for the people of the territory, and the people of the territory are the main focus of the building. The building is designed to be open to the public, and the public is a driving force for the building.

Programme

The building will act around a square metre. It is the main focus of the building, not just a social meeting place, but also a place where you can experience and understand the world around you. The building is a place where you can go to understand the world around you, to experience and understand the world around you. The building is a place where you can meet and experience the world around you.

Construction

The building is situated on the site, surrounded by the city of Kandahar, a rare example for the city of Kandahar. The building is for the people of Kandahar, and the people of Kandahar are the main focus of the building. The building is designed to be open to the public, and the public is a driving force for the building.
