INTEGRATED SUSTAINABLE DESIGN: FORM VS. FUNCTION
1st HOLCIM FORUM FOR SUSTAINABLE CONSTRUCTION - SEPTEMBER 2004

1. INTRODUCTION

The paper presents a case study of a sustainable design project, focusing on the integration of form and function. The project aims to address environmental, social, and economic sustainability goals through innovative design solutions.

2. APOLLO: THE ROLE OF RATIONALITY

The project uses a rational approach to design, where the form is determined by the functional requirements and environmental constraints. The design process involves careful consideration of materials, energy use, and occupant comfort.

3. DOMINUS MINERVA: ENVIRONMENTAL DESIGN

The project emphasizes the importance of integrating environmental considerations into the design process. This includes the use of sustainable materials, energy-efficient systems, and the optimization of natural light.

4. CONCLUSION: INTEGRATING SUSTAINABLE DESIGN

The project demonstrates the potential of integrating form and function in sustainable design. By prioritizing environmental considerations and functional requirements, the design achieves a balance that is beneficial for both the occupants and the environment.
